Battle Tank Operation Manual

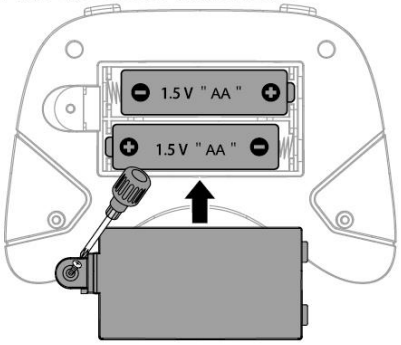

①Tank battery connection

Unscrew the screws to open the battery cover, connect the included lithium battery, put on the battery cover, and tighten the screws.

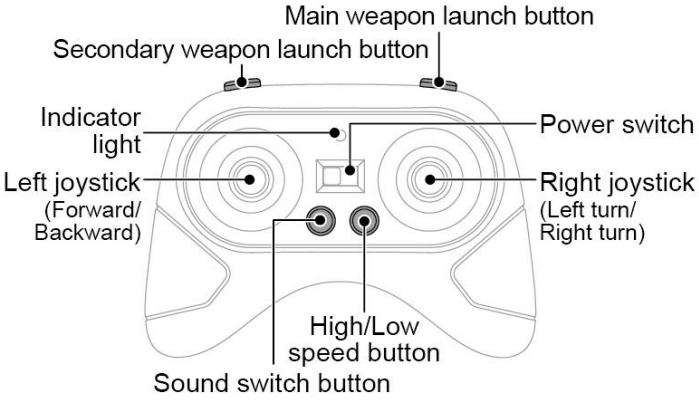

②Remote control battery installation

Use a screwdriver to unscrew the screws at the bottom of the remote control, and correctly insert 2 AA batteries according to the electrode indicators.

③Remote control button instructions

Sound switch button:
The default mode when powered on is sound effect mode (no music). Press the sound switch button to enter full sound source mode. Press again to mute the tank, cycling through the three modes.

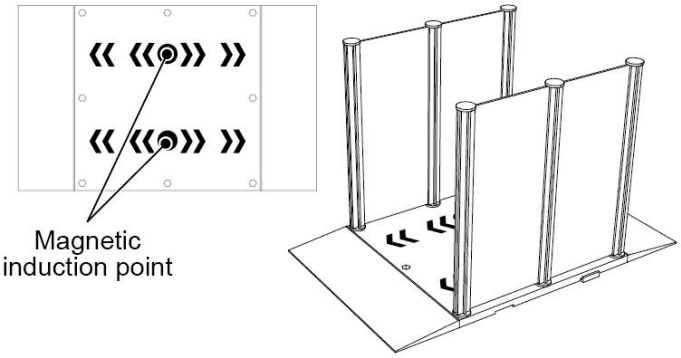

High/Low speed button:
Press the high/low speed button on the remote control to switch between high and low speed modes. The default mode when powered on is high speed.

Main weapon launch button:
Launch the main weapon: the color of the barrel changes from red to white, causing 2 points of damage. Wait 5 seconds for cooldown before launching again.

Secondary weapon launch button:
Launch the secondary weapon: the color of the barrel changes from red to yellow, causing 1 point of damage. Wait 2 seconds for cooldown before launching again.

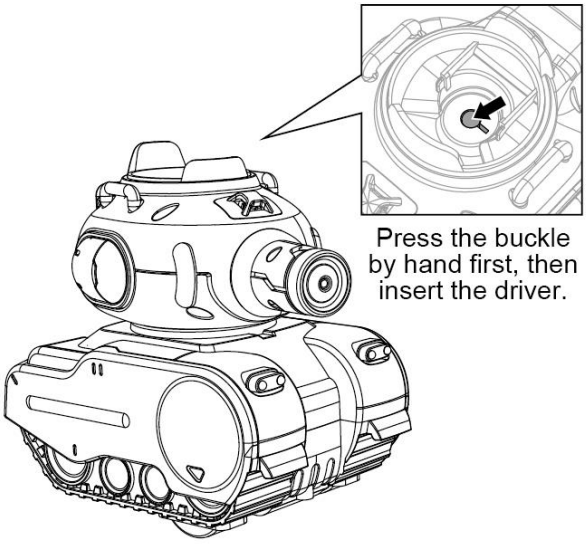

④Induction platform instructions

When the tank is hit, it can restore health points through the induction platform. After each 1 health point is added, wait 10 seconds for cooldown before adding health points again via the induction platform.

⑤Code pairing to start the game

First, turn on the power switch at the bottom of the tank, then press the buckle and insert the driver. Turn on the remote control's power switch, push any joystick to pair with the tank. Start the game after successful pairing.

⑥Infrared sensing battle

Aim the tank's muzzle at the 3 infrared sensors of the arrow and fire. Hitting them will make the opponent's tank lose health points. When all indicator lights of the opponent's tank go out, the driver will be ejected, and you win the battle!
